

## ABSTRACT

A resin composition comprising 10 to 99 mass% of a biodegradable aliphatic polyester resin (X), and 90 to 1 mass% of a polyolefin resin (Y). The resin composition preferably has a total light transmittance of not higher than 60% as measured with respect to a 3-mm thick test piece in conformity with JIS K7105, or the polyolefin resin (Y) preferably forms a continuous phase in the resin composition.
